

Prompt A continuous photorealistic walk through a rural farm courtyard in stable spring daylight. First observe the raised timber farmhouse in the center, the rooved circular well in front of it and the low barn on its right. Walk around the outside of the near timber granary on the left. Its solid wall must completely hide the farmhouse briefly; after passing around it, observe the same farmhouse again from the changed position. Preserve the farmhouse roof, porch, steps, well and barn identities and their fixed spatial relationships. One location and one continuous camera move.
